

## Education

The business of education should never stand in the way of its mission.

Students are demanding greater access to educational opportunities at more times and delivered in more ways. With these increased demands comes the need to manage additional services. Each service requires payment collection points and every collection point requires oversight.

Cirfin™ helps educational providers and students leverage today's electronic payment technologies. You can handle your payments more efficiently while providing greater service. Here are a few ways Cirfin™ can impact your school:

- »» **Provide greater access.** Offering students payment options at more points leads to greater educational access. Cirfin™ provides multiple payment vehicles including credit cards, checks, automatic withdrawals, CirfNWebPay™ and others.
- »» **Speed up service.** Cirfin™ assists students and staff in efficiently handling payments in more places reducing the waiting time during enrollment or signup processes.
- »» **Automated recurring payment services.** Provide a smart method of automatically and periodically receiving payments from the student payer's checking account or credit card. Now you can provide flexible options for students who cannot pay for services in full.
- »» **Reduce your payment-related labor.** Make paper checks into electronic payments. Cirfin™ includes an electronic check converter. No more trips to the bank. Simply scan one check or thousands of checks. Transaction data is ready for import into your accounting system while the money automatically deposits into your account the next business day.
- »» **Spend less time collecting.** Cirfin™ can compare all scanned checks against a comprehensive database. Checks that don't measure up are denied. If a check goes bad, collections are automatically managed without you ever having to pick up the phone.
- »» **Website integration.** With CirfNWebPay™ you can provide your students with a link from your Website with instant access to balances and with immediate online payment options.
- »» **Increase privacy and portability.** Cirfin™ creates electronic records of all transactions, including paper checks, at the point of transaction. All payments are now available to you for reporting and reconciliation.
- »» **Speed up your cash flow.** Cirfin™ processes securely on the web with interfaces to banks and credit card processors. This makes your checks and charges happen fast. Cash in the bank the next business day.
- »» **Consolidate payment management.** Now you can channel all payments from multiple schools or departments into one accounting point, regardless of location.
